

From MLOps to applied GenAI

Building practical workflows with Modeling partners, then sharing and applying the learning.

01 MLOPS FOUNDATION

MLOps with SF Modeling

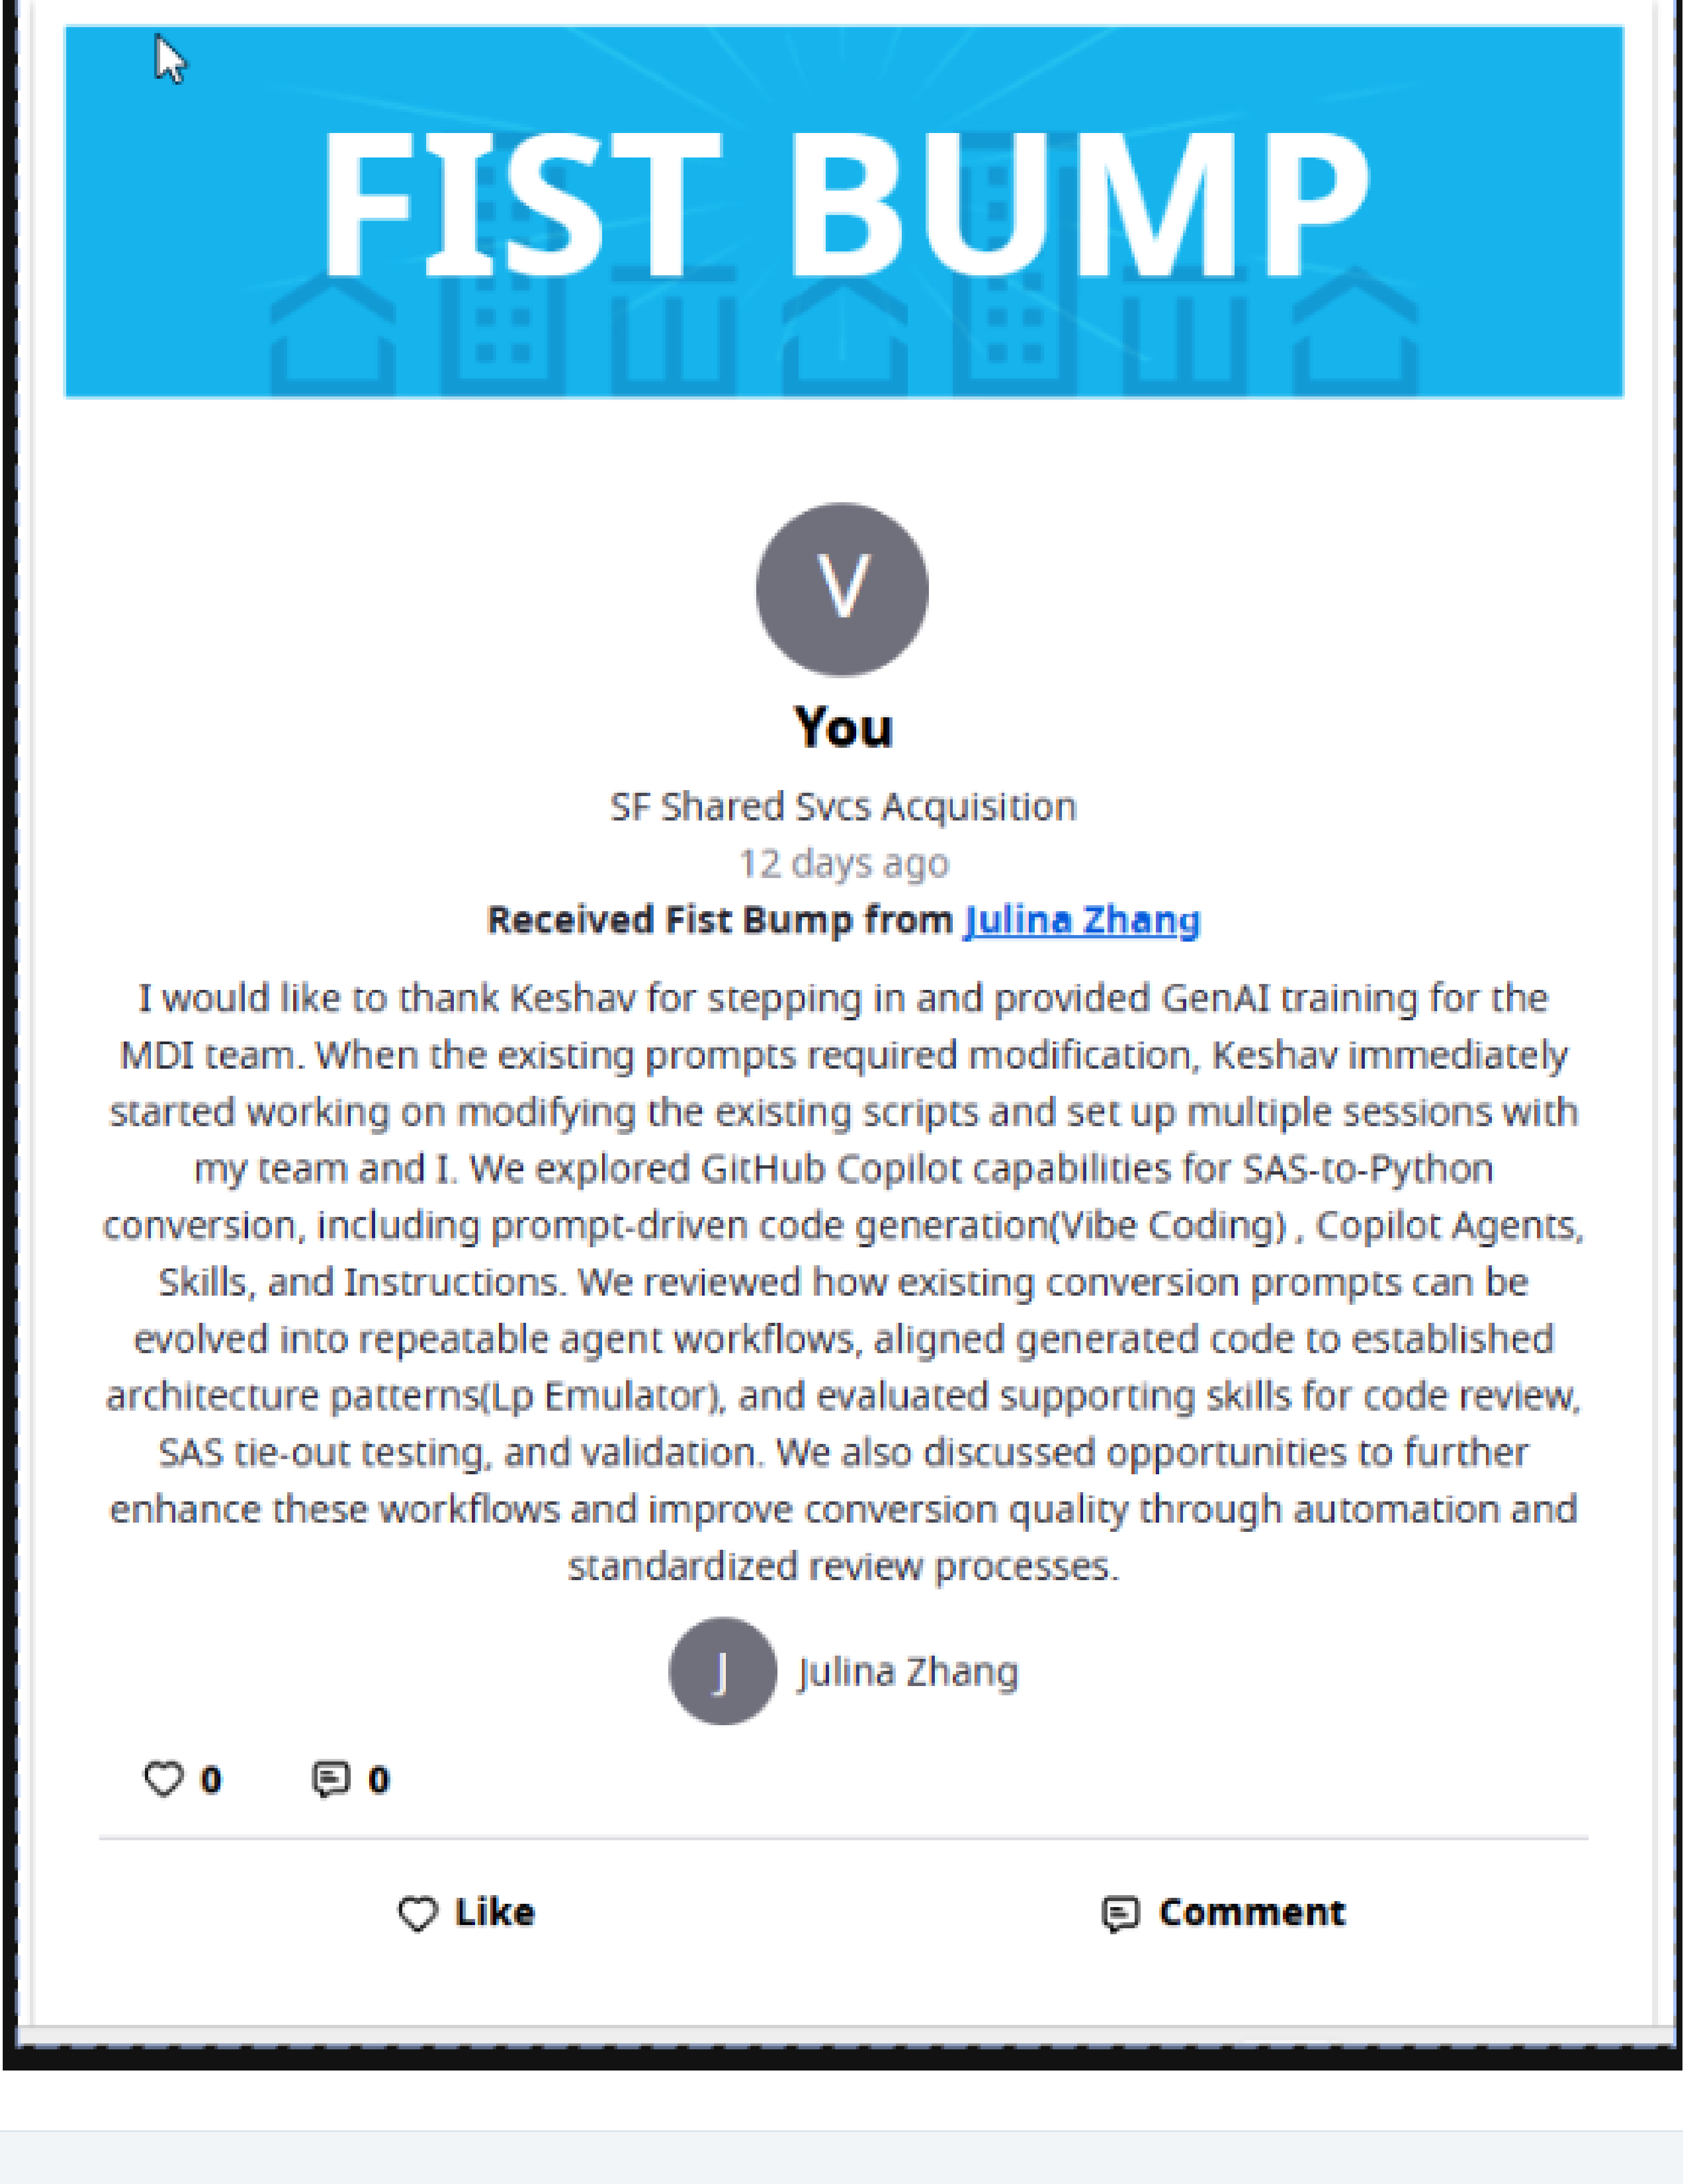

Developed the technology prototype and partnered with Hao and SF Modeling on pipeline implementation and a joint presentation.

02 NEW INITIATIVE

GenAI collaboration | FOCUS model

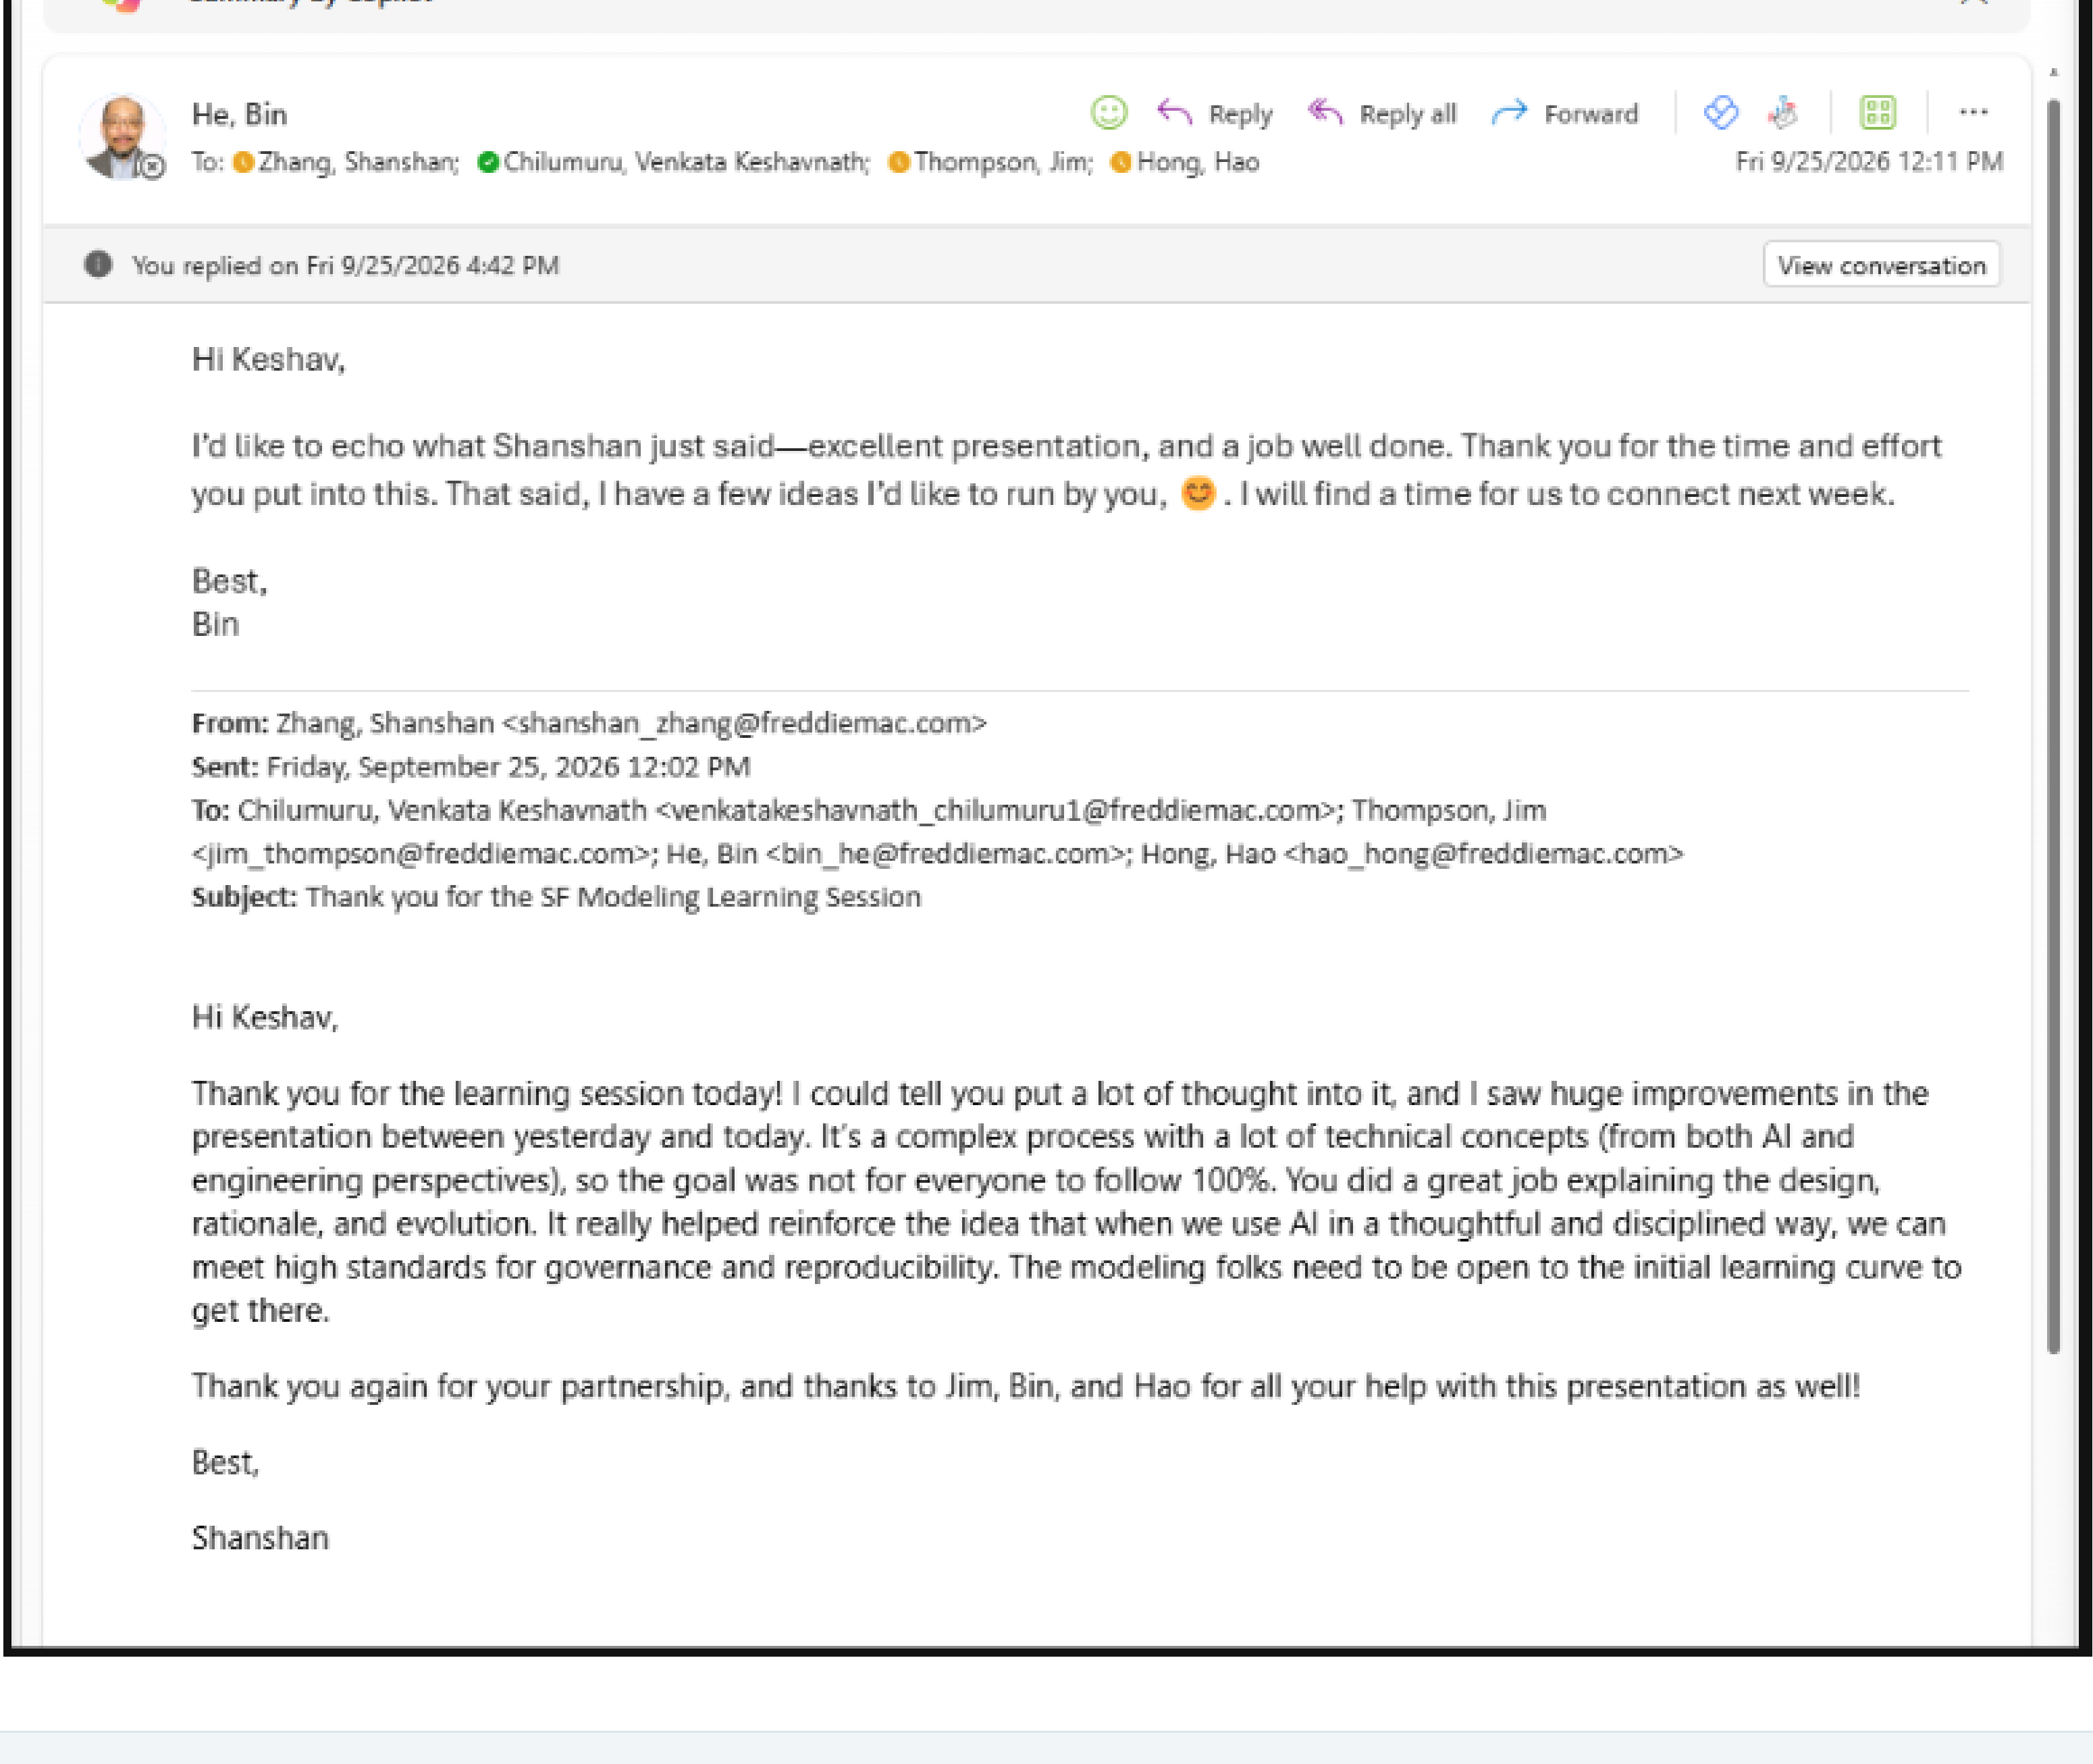

Supported the Modeling Team with hands-on sessions, adapting prompts and scripts and exploring repeatable SAS-to-Python agent workflows.

03 LEARNING SERIES

SAS Agent Mastery prototype

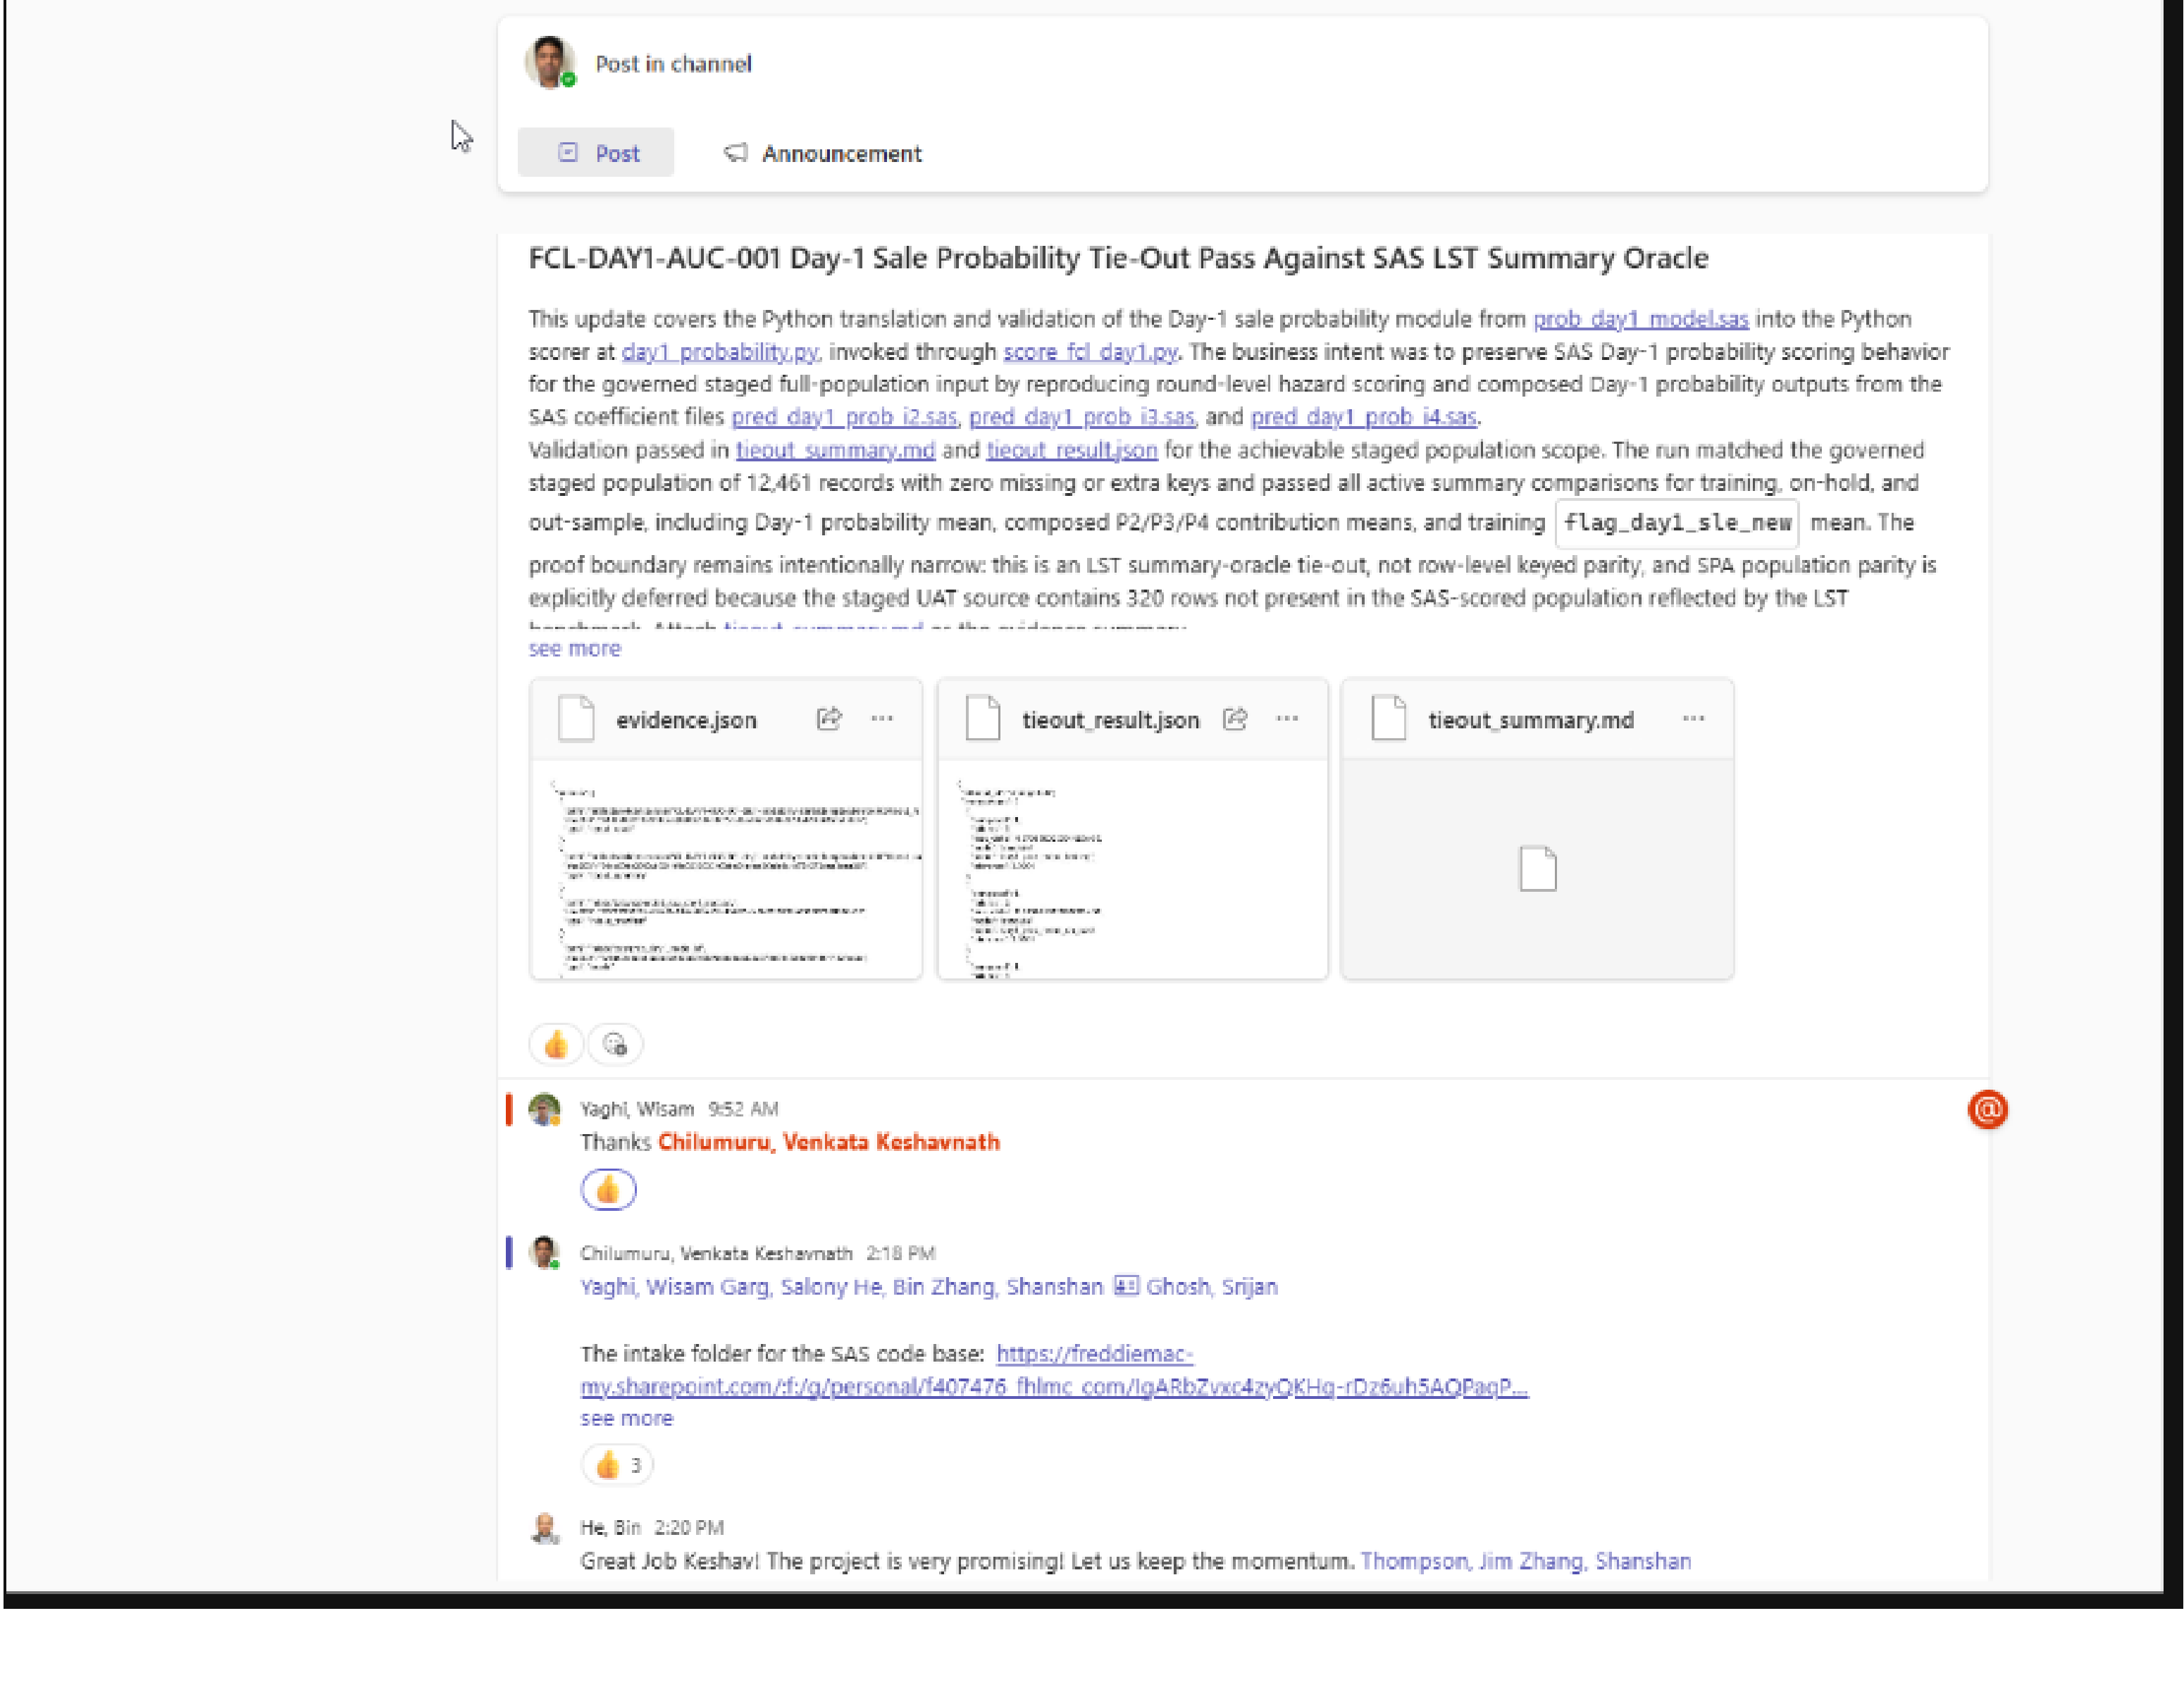

Shared the prototype in the SF Modeling learning series, explaining the design, evolution, governance and reproducibility.

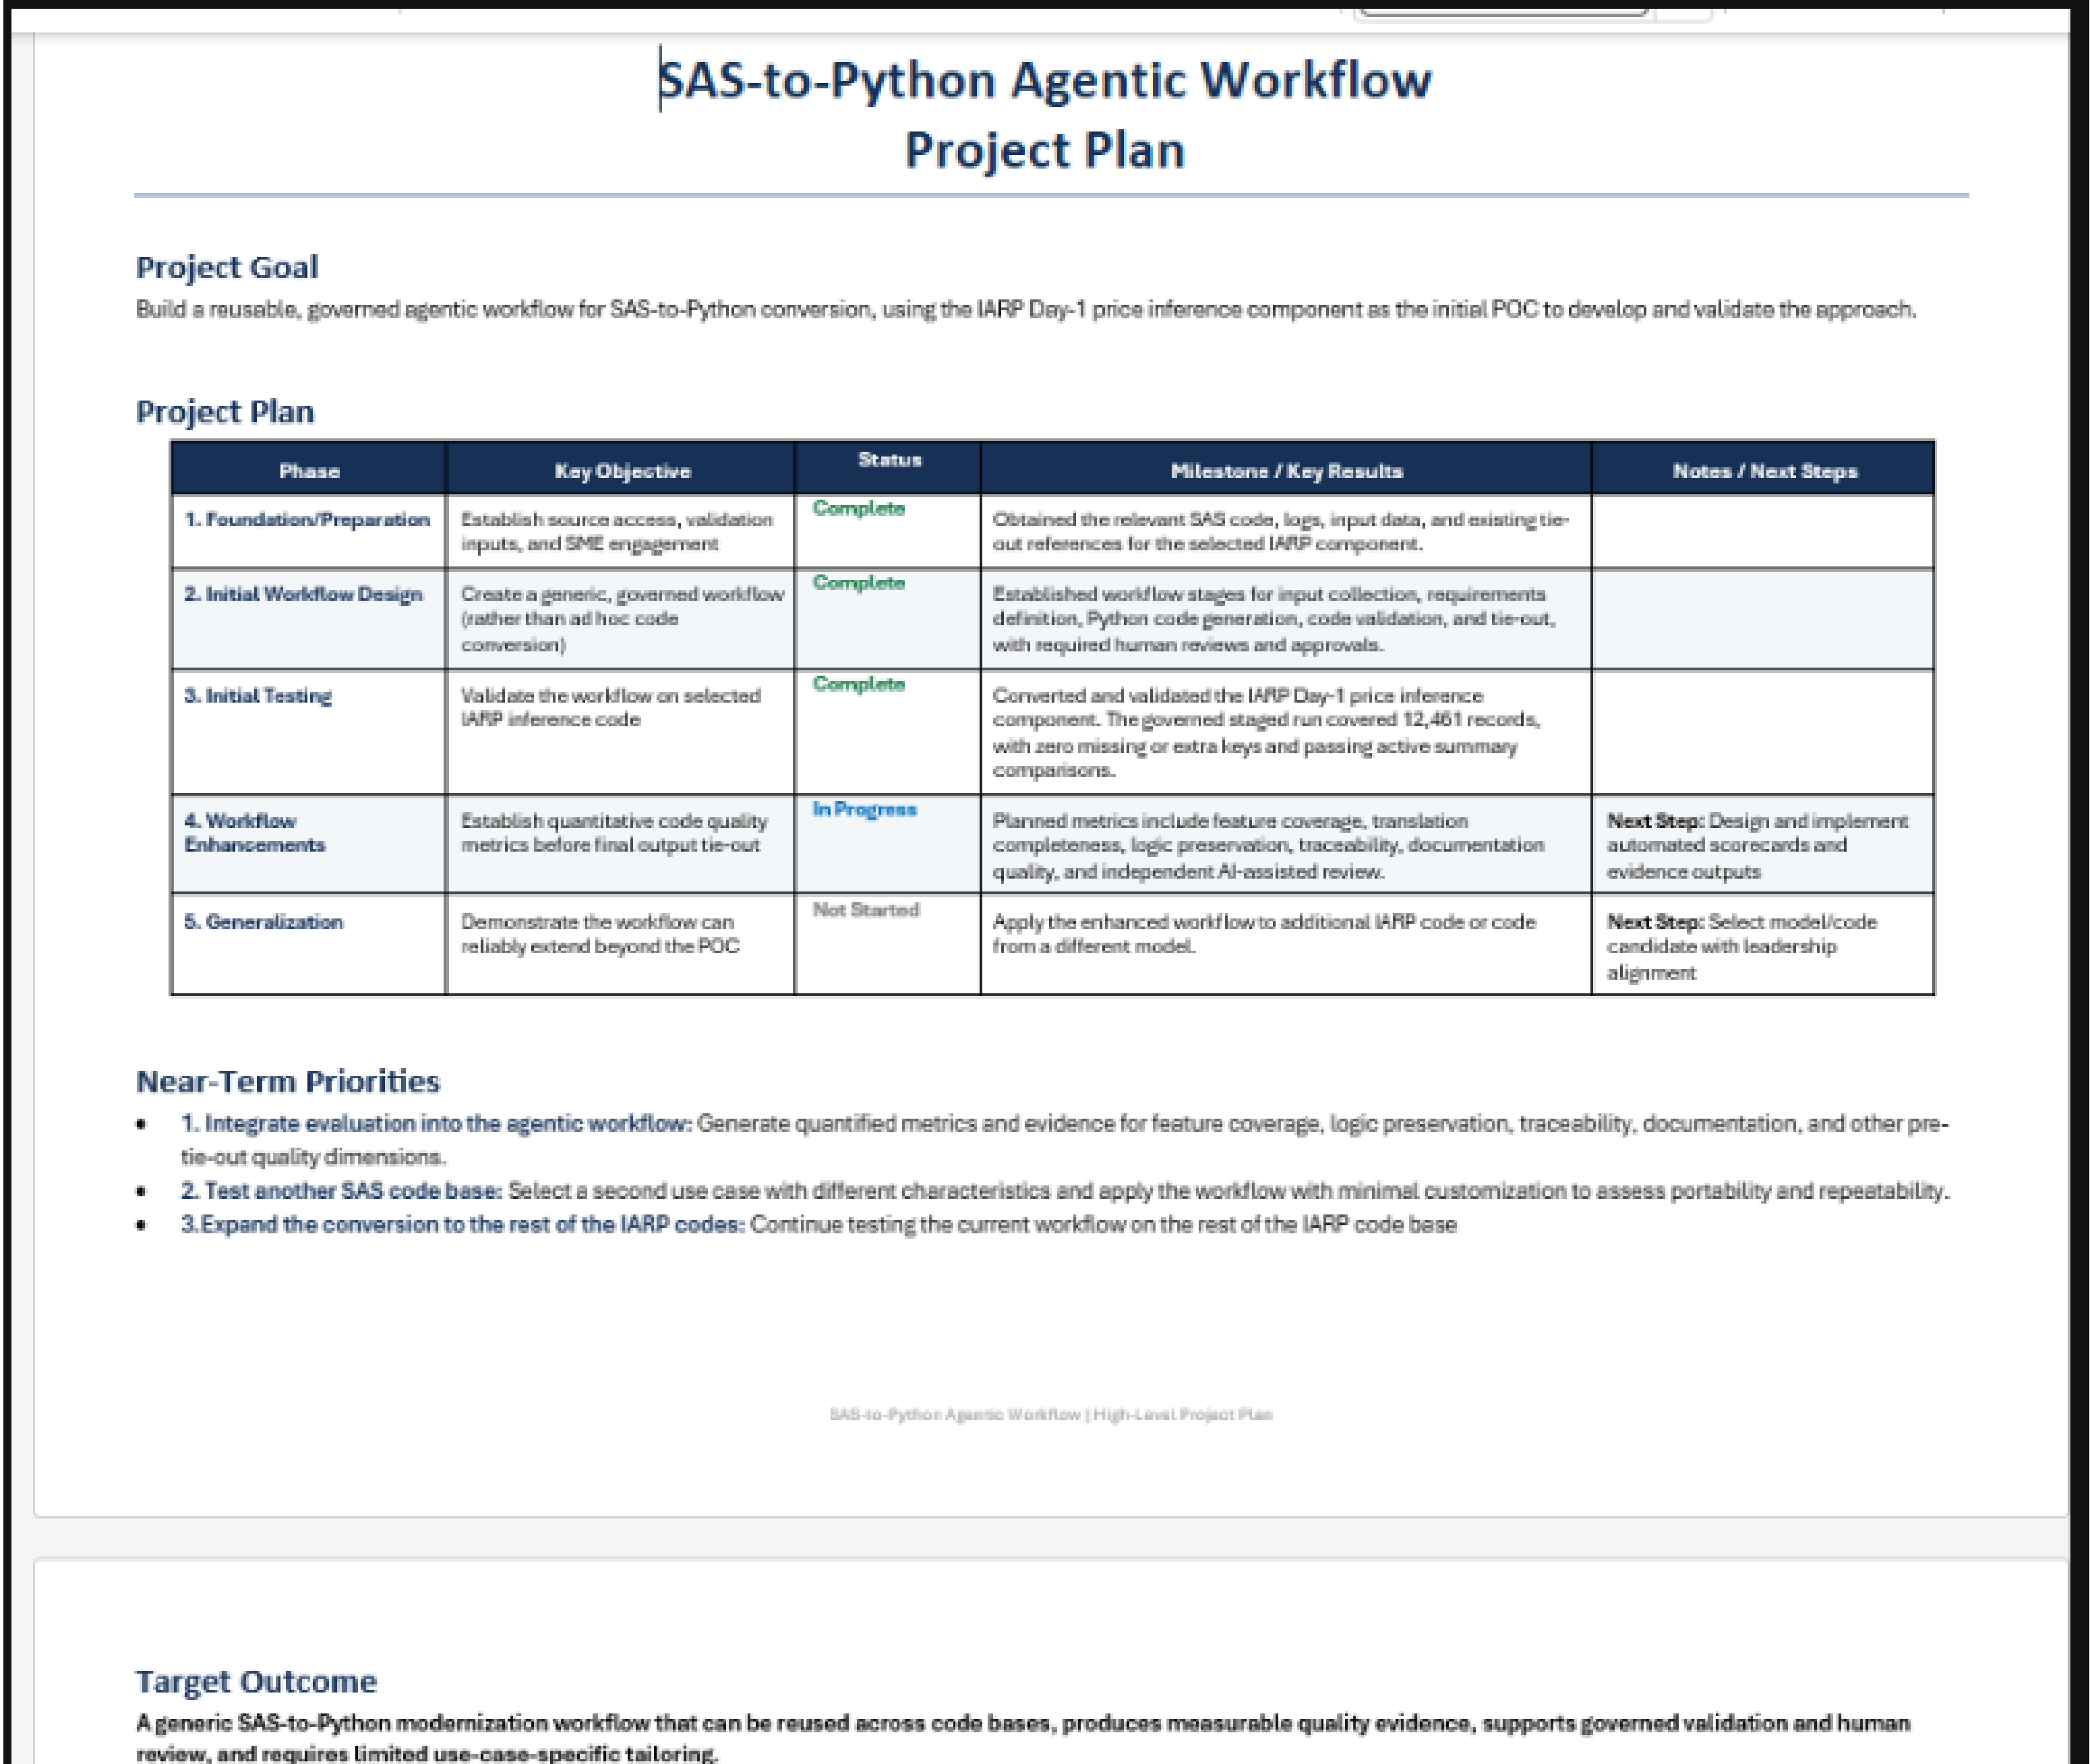

04 CURRENT APPLICATION

Applying the prototype to IARP

The staged Day-1 run covered 12,461 records and passed the reported summary-level tie-out. Next: strengthen quality evidence, extend coverage and test repeatability.

Project plan and next steps

Scope: Initial component-level POC. Row-level parity and validation of the full IARP application are not yet established.
